會議討論議題

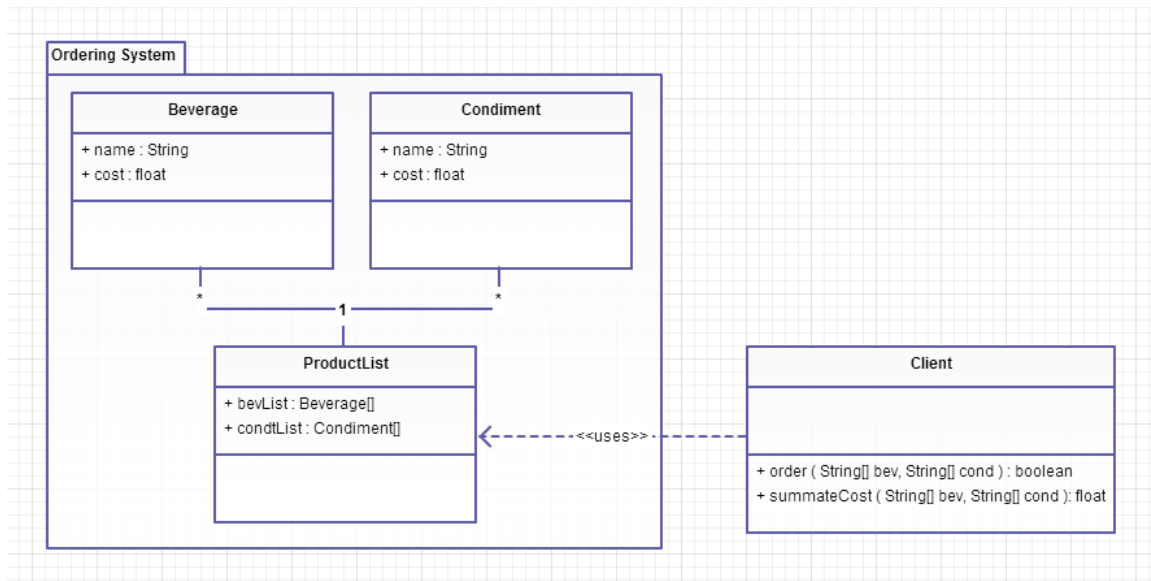

1. 作業討論

9-2

Direct Code from last week (one writes code, other observes.)

The 9-2 requirements doesn't mention about whether we should keep list of client. Therefore, when client needs to get summation from order list, we let each list of beverage and condiment be string array, whose elements can be match to one specific cost respectively, and then system summed them to a float result. The order() operation just checks whether the arguments are valid to be ordered.

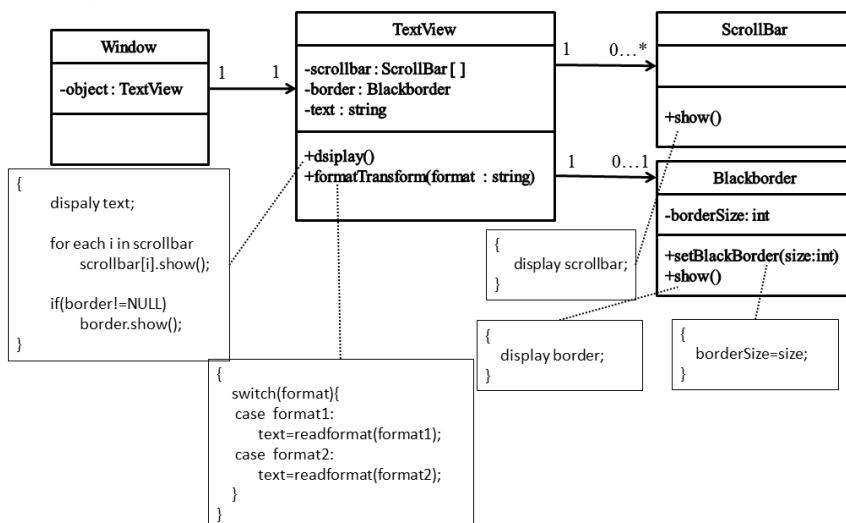

9-1

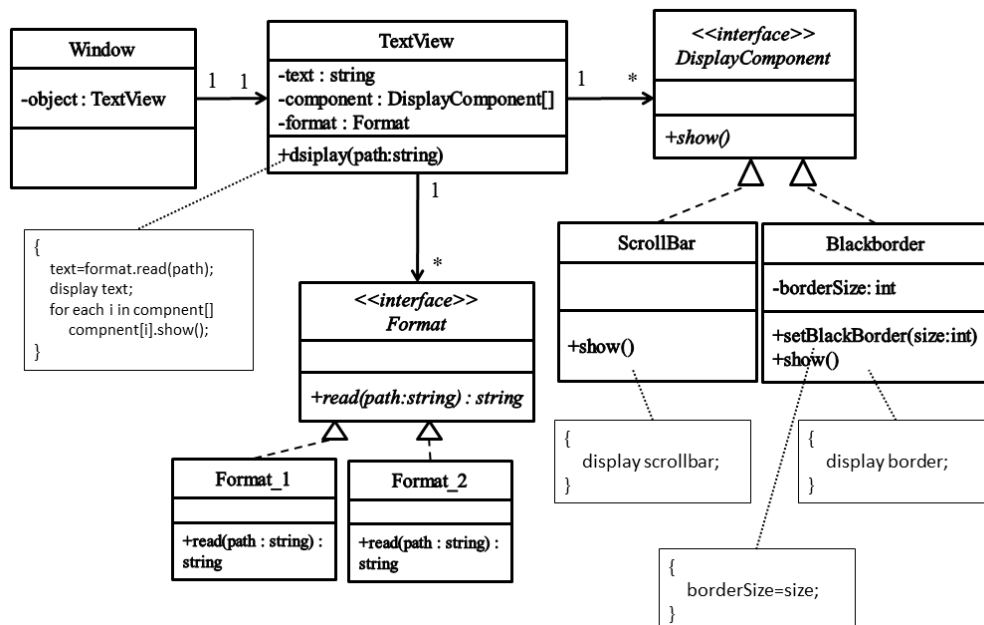

Follow the discussion on 4/27, we identify some problems of initial design

- (1) **Missing multiplicity of scrollbar**s.
- (2) **Whether scrollbar should show on the screen.**
- (3) **Whether scrollbar, black-border should be concrete class.**

It is highly likely that we will support various file formats for display in the future.

Then we refactoring it final result:
