會議議程

1. Discuss Homework
2. Modify WBS of further works

會議討論議題

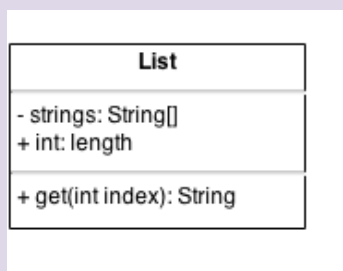

1. Discuss Homework

■ HW1

- A List data structure is implemented with a String array which can contain a series of String objects.

- We can access List by calling the get() method with an index, and know how many Strings inside the List with a public attribute: length.

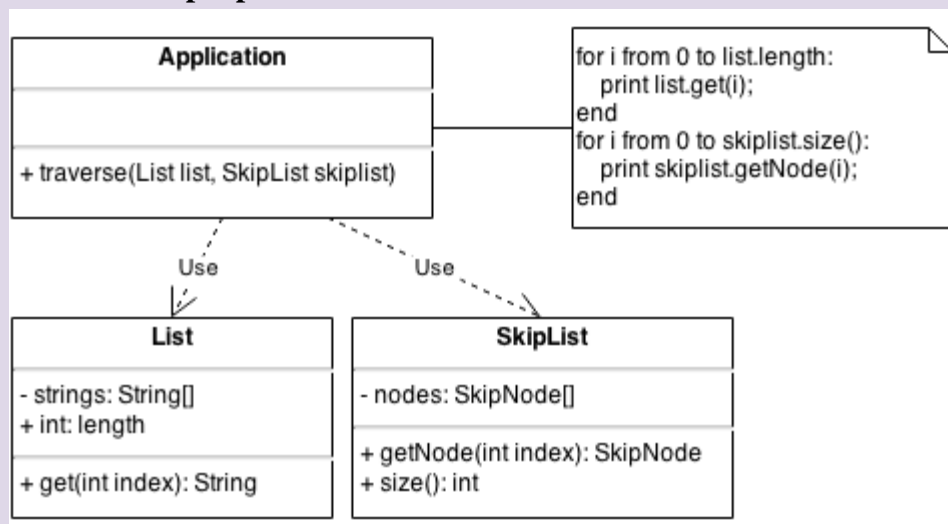

- Furthermore, another data structure called SkipList which consists of a series of SkipNodes.

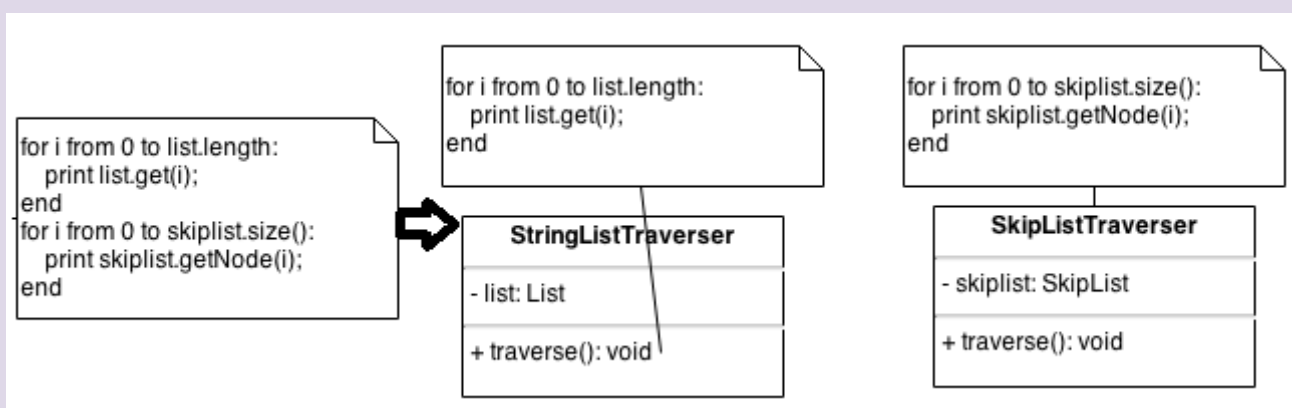

- Each SkipNode can be accessed by invoking the getNode() method in SkipList with an index. And we have the idea about the size of SkipList with its size() method.

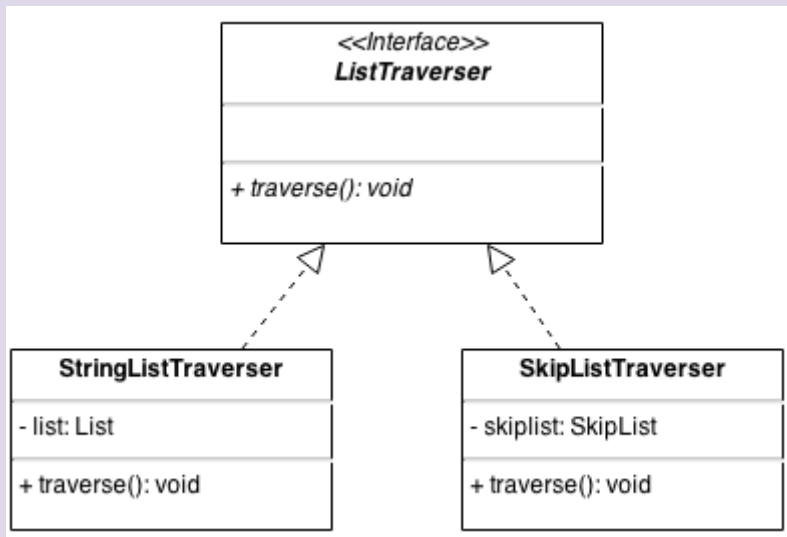

- Now we have to traverse both List and SkipList to print out those object items in the two different data structures for some purpose.

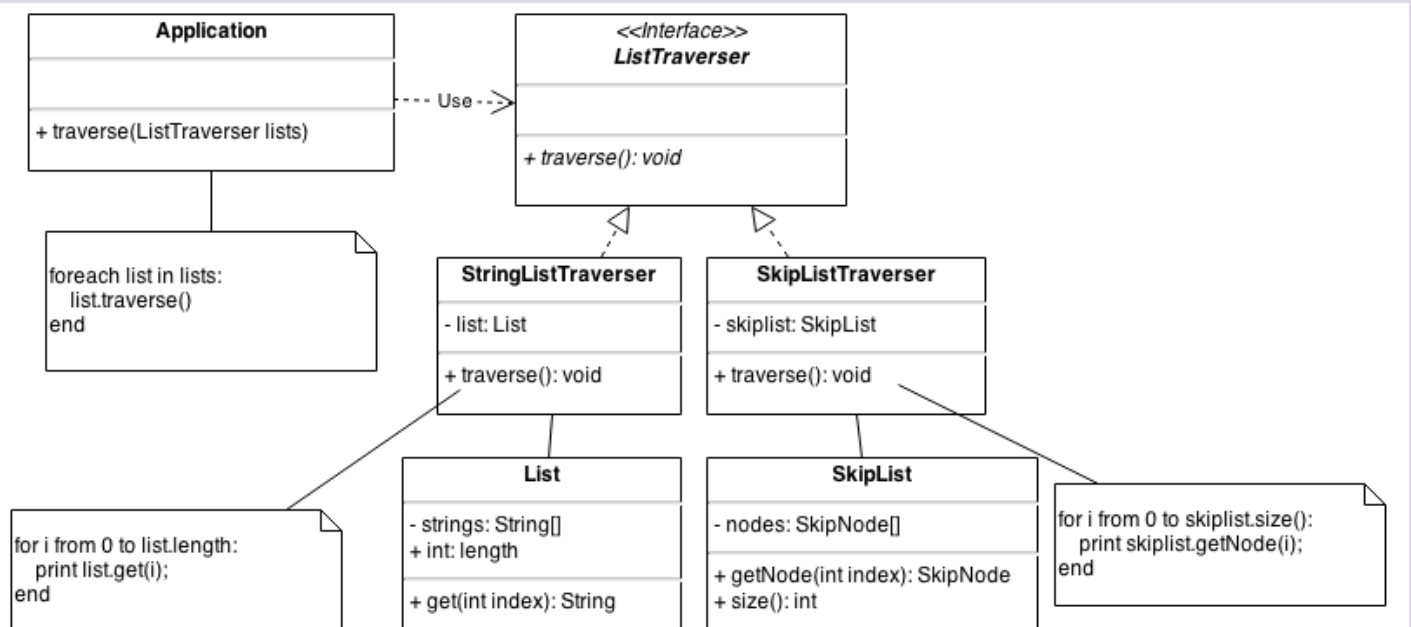

- Issue:
 - If there's new kind of list, we need to modify traverse.
 - We need to know how to print different objects in lists.
- Redesign
 - Encapsulate What Varies.

- Abstract Common Behaviors

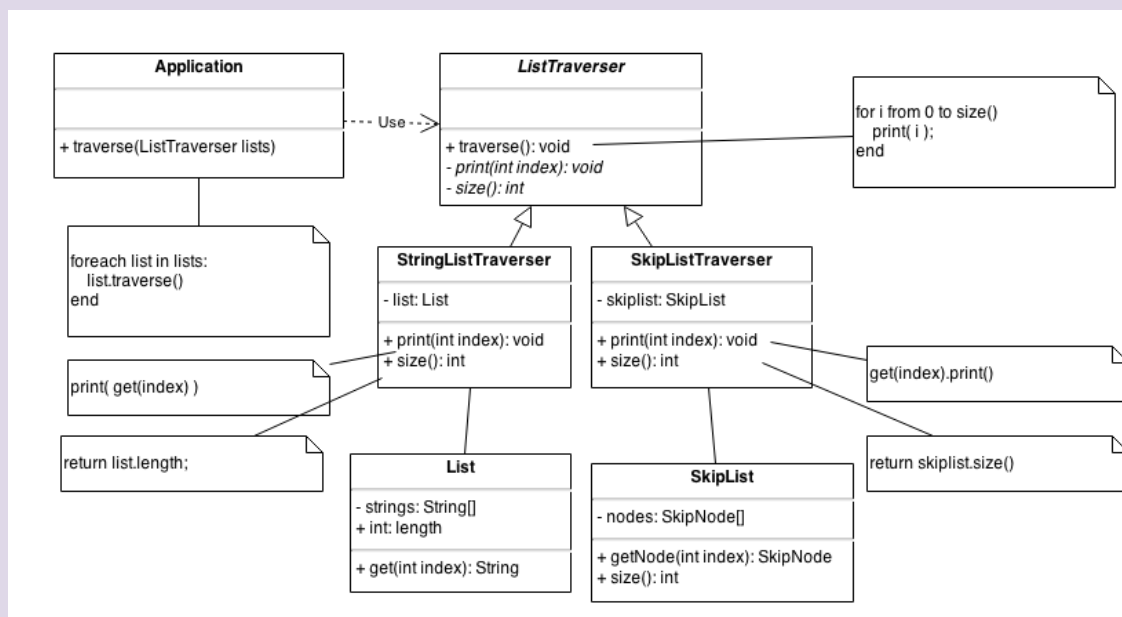

■ Compose or Delegate Abstract Behaviors

■ Looks like "Strategy Pattern"

● Another Version

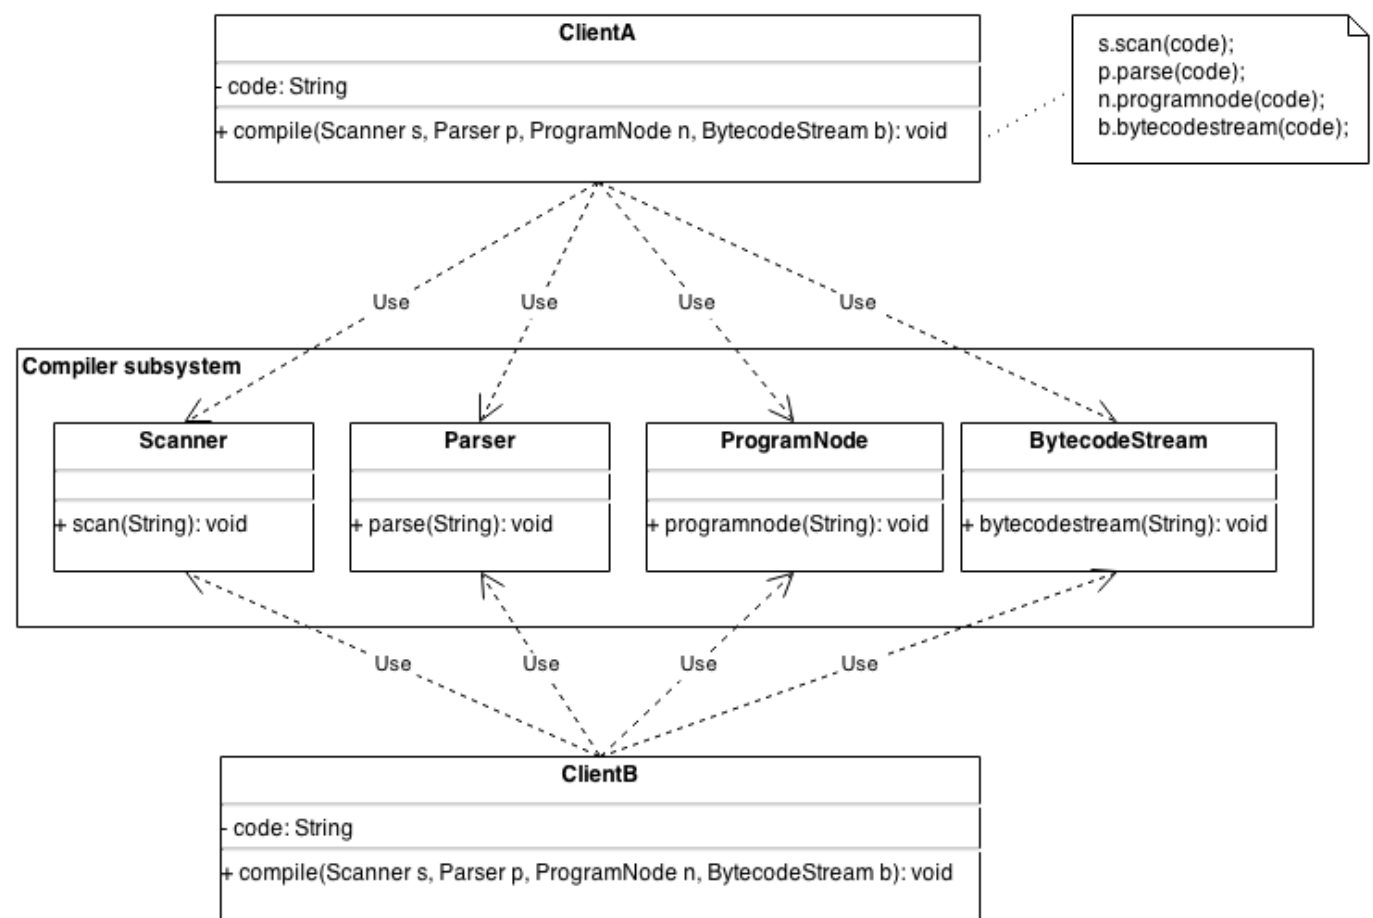

■ HW2

- A compiler subsystem contains classes such as Scanner, Parser, ProgramNode, and BytecodeStream.

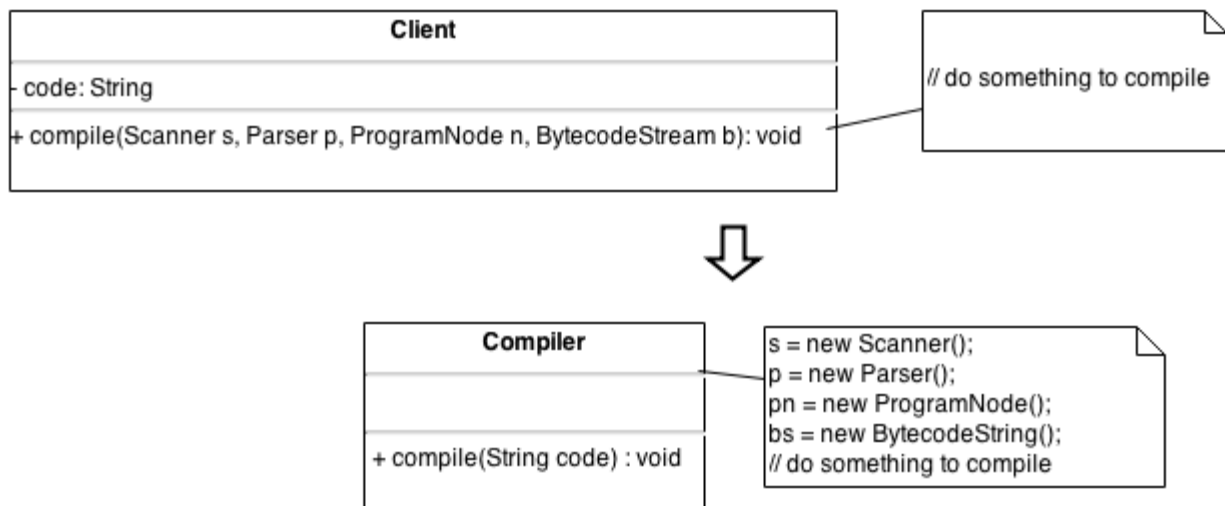

Compiler subsystem

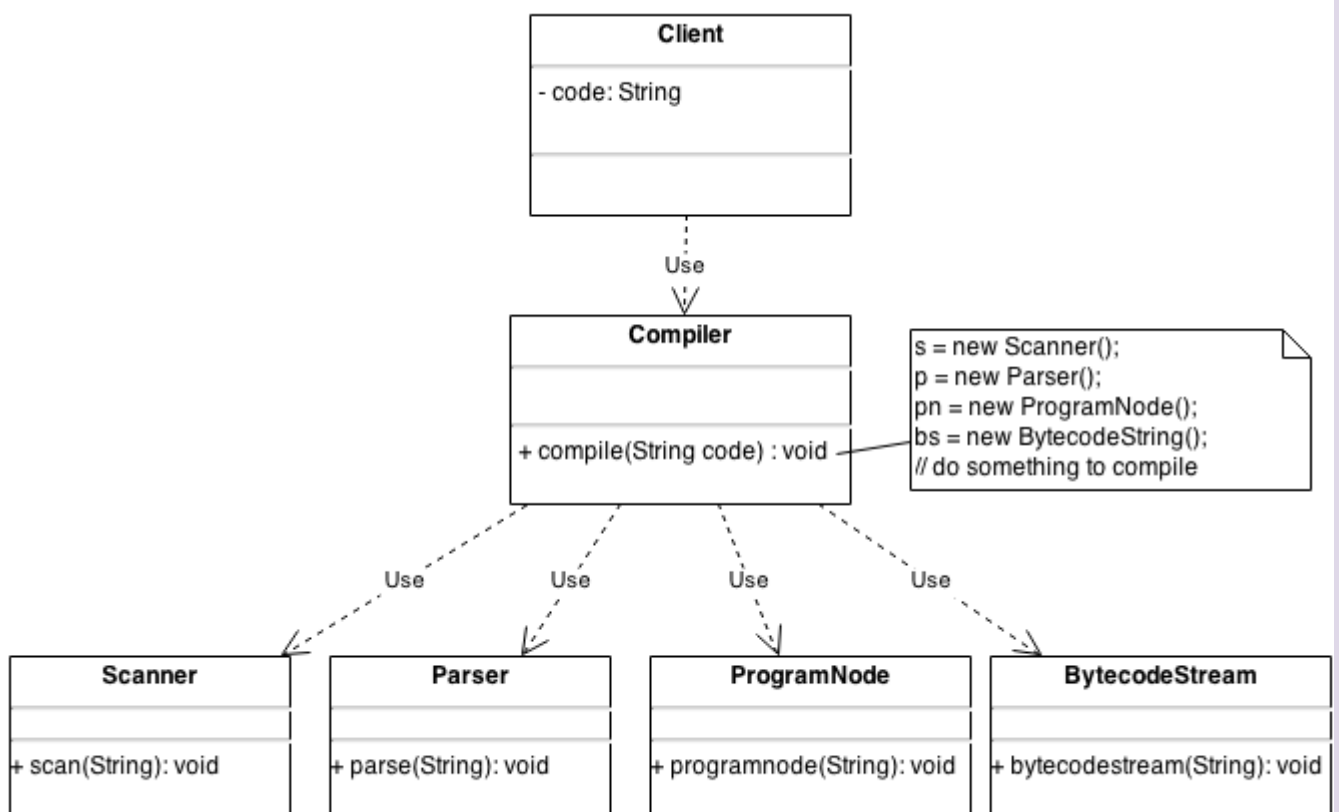

- The client classes need to use Scanner, Parser, ProgramNode, and BytecodeStream to compile some code.

- Redesign

- Encapsulate What Varies.
- Abstract Common Behaviors (skip)
- Compose or Delegate Abstract Behaviors

2. Modify WBS of further works

- Implement the first version before 6/5.
- Aggregate and test before 6/9.
